

ANNOUNCEMENT: Publication of **Governing at the Speed of Reality: A Quantum Governance Playbook for Flow, Entanglement, and Fragility in Large Complex Projects** (ISBN 978-1-105-07120-1)

The 488-page paperback edition of *Governing at the Speed of Reality: A Quantum Governance Playbook for Flow, Entanglement, and Fragility in Large Complex Projects* has now been officially released on Lulu.com. The print edition is priced at \$175, with a purchase link available here: ([Governing at the Speed of Reality](#)) This landmark volume represents the most comprehensive consolidation of Quantum Project Management (QPM) and Quantum Governance theory to date, extending and integrating insights first introduced in Quantum Project Management, Measurement of Complexity, Quantum Fragility Index, and Governing Project Internalities.

The book provides a full governance architecture for modern Large Complex Projects (LCPs), addressing the accelerating volatility, complexity, and entanglement that define today's project ecosystems. Drawing from quantum and relativistic analogs, the work reframes project execution as a dynamic open system where flows, internalities, and stakeholder spacetime interactions determine performance outcomes. As stated in the

forward, "large complex projects are dynamic open systems influenced by their setting, imbued with uncertainty, and characterized by emergent behaviors and outcomes." The playbook operationalizes these insights into actionable governance mechanisms, including fragility telemetry, intervention thresholds, and real-time control loops—tools that represent a significant advancement beyond classical project management theory.

This publication is an important contribution to the field, offering project leaders, owners, and PMOs a rigorous, predictive, and deeply practical framework for stabilizing execution in environments where traditional methods consistently fall short. By integrating quantum analogies with measurable operational metrics, the book establishes a new foundation for governing flow, managing entanglement, and anticipating fragility across the full lifecycle of large capital programs.

In support of the PM World Journal community, Bob Prieto has graciously agreed to provide complimentary PDF copies of the book to PMWJ readers through the end of the year. The PDF edition can be accessed directly via his ResearchGate page at the following link: ([PDF](#)) [Governing at the Speed of Reality A Quantum Governance Playbook for Flow, Entanglement, and Fragility in Large Complex Projects](#)
